

Alprostadil Gel

Medication:

This compounded prescription contains the prostaglandin, alprostadil.

Uses:

This medication is used for a variety of purposes (i.e. erectile or orgasmic dysfunctions).

Directions:

This medication should be applied to the penis or clitoris according to the directions provided by your prescriber.

Side Effects:

This medication may cause headache, flushing, sweating, light-headedness, priapism (prolonged, painful erection) or urethral burning (female partner). Discontinue use if itching or burning occurs.

Precautions:

Contact your physician if you experience redness, lumps, swelling, tenderness, curving of the erect penis or prolonged painful erection. Avoid use with alcohol.

While the gel base used in this prescription is not petroleum based, its affect on condoms is unknown.

Missed Dose:

Always follow your physician's instructions. Do not exceed the dosage prescribed by your physician.

Storage:

Store medication in the refrigerator at 2° to 8° C (36° to 46° F). It may be kept at room temperature (below 30° C or 86° F) for a maximum of two months.
